Design a data exchange system (documents, photos) between the application (computer, tablet, smartphone) and the cloud system.

System assumptions:

- Ability of transfer files by protocol https [**necessary**].
- Files will be stored in a cloud system (Azure or AWS, GoogleBox) .[**necessary**]
- Ensuring login, authentication and authorization (rights: read, write, update) [**for a good grade**].
- Ensuring file version control (date, size, version) [**for a very good grade**].

Ability of system:

- Login.
- Logout.
- Download file.
- Upload file.
- Read list of files.
- Implementation of "LogBook". Registration of logins and file operations. (essential in a text file (csv,json,xml), perfect in a database).

The first presentation of the project should be placed here.

The presentation should include the following:

1 Problem Statement/ idea

- Challenge (What seems to be the most difficult?)
- Approach (How the problem is going to be solved? - briefly)
- Outcome (How the project ended: success, partial success or failure? - briefly)

2 State of the art

- Research (Methods and sources – how and where to acquire the information)
- Related work (What are the existing solutions/products and remarks about the advantages/disadvantages of those)
- Detailed comparison of the three most similar existing solutions

3 Short project specifications and requirements

- Objectives (Precise goals and limits set to the project)
- Sources (Where to find additional, detailed information, contact organizations or people)

- Tools and technologies (What are the tools and/or software needed? What is the justification for the particular choice)
- Risk (Define possible fields of project, or its elements, failure risks) 3.6 Measures of success (Proposed/defined criteria to be verified if the project is successful at the end of the road.)

APUNTES DEL PROFESOR PARA LA PRIMERA PRESENTACIÓN:

→ Decidir CLoud
→ Las tecnologias del cloud provider
→ pequeña arquitectura

→ utilizar docker compose quizas para hacer una mini prueba antes. Es decir primero hacerlo localizado para luego trasladarlo a computing.

→ diagrama del sistema?

How we divide
